

Pluto and You

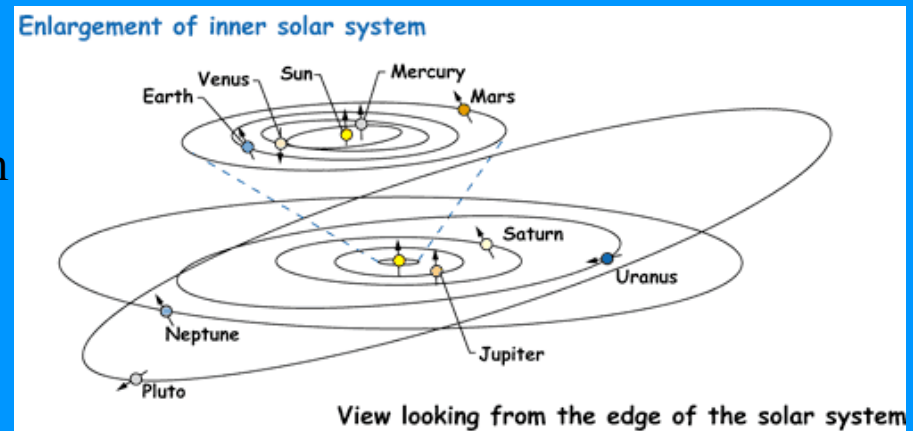

By: Student A

If Your Looking for a
Place to Live? Then step
right up and come buy
Pluto!!

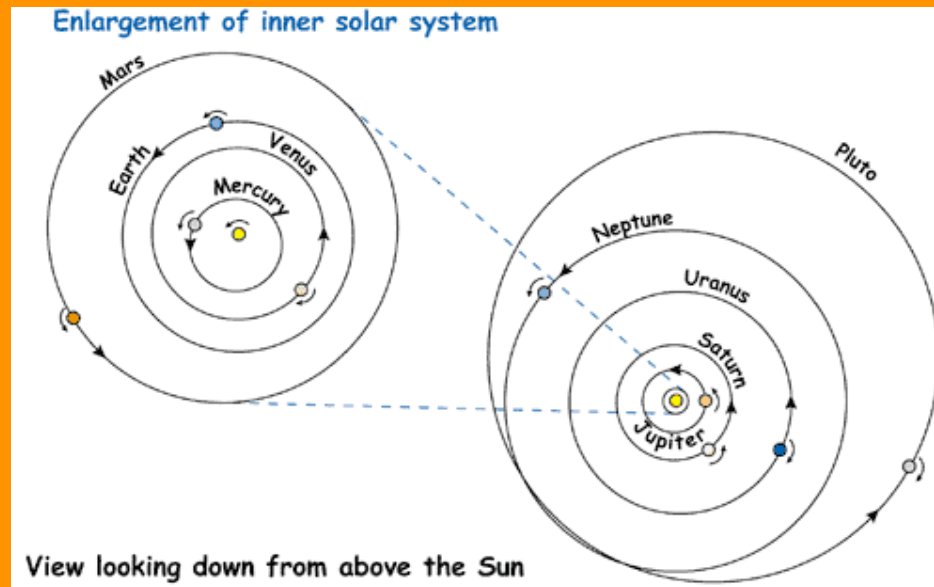

- Watch this commercial for more details.

Heres what you need to know about Pluto

- Diameter: 2,390 km
- Mass: $1.25 \times 10^{22} \text{ kg} = 1277.5 \text{ kg}$
- Circumference: 244.186 au
- Distance from the Sun: 5,913,520,000 km
- Distance from the Earth: $39.95 \times 93 = 3715.35 \text{ km}$
- Temperature Range: -223 C, -400 F
- Length of Day: 6.4 Earth days
- Length of Year: 248.53 Earth years
- Direction of Spin: The direction of the spin is going counterclockwise
- Density: 1.750 g /cm³
- Amount of Gravity: 0.58m/s²

Here are some more things you need to know

- Direction of orbit around the Sun: Pluto goes counterclockwise around the Sun
- Atmosphere: Made of nitrogen, carbon monoxide, methane, and water ices

Three Really Interesting Facts

- Interesting Facts: One moon of Pluto is Charon
- If you weigh 70 pounds on Earth you would weigh 4 pounds on Pluto
- If you lived on Pluto you'd have to live 248 Earth years to celebrate your first birthday in Pluto years

What we will provided if you buy this planet

- One item that will be provided is Inconel X. Inconel X maintains its strength to about 400F, this product will help you stay warm since its so cold on Pluto (If you wish for two then just ask before you leave for Pluto). Another product will be a weather control machine, this product will help you control the weather to what you desire (like you might want it to snow, rain, sunny, or just anything that the weather machine will let you do with the weather). If your wondering about food we will provide that each month, for each month you will send us a letter in advance to let us know what you want to eat for that month. This will cost you about 150\$, but it may cost you more or less depending on how much food you order. The food you order will arrive in about 5 to 10 days depending on how much food you order and when you send the letter.

More Items that will be provided

- If you buy this Planet then you will have to tell us how many houses you will need and how many people will be living with you so we know how big to make the houses. If you wish to communicate with us, or anybody else, then you will need to communicate with us by letter because there is no electricity at Pluto. The last thing that will be provided is oxygen suits, these will be provided because there is no oxygen on Pluto (The oxygen tanks will not cost anything and will be sent everyday). (If there were anything you would like us to send you while living there on Pluto just send us a letter telling us what you need. This will still cost money.)

What might be provided in the Future

- What might be provided in the future is an oxygen bubble. This is already available but in the future they have to make it on a larger scale for it to fit Pluto. Another thing that might be invented is a machine that makes air to breath. Once you have air you can make fire because fire creates heat. Then once you have created heat then you can melt some of Pluto to get water. Something that someone might come up with (invent) is a seed that can grow anywhere and any kind of food because on Pluto you don't have growing foods. One last thing that might be invented is a portable home that when it is in its portable stage it is 5 inches long and 2 inches wide, but when it is in its home stage then it has every room that you would normally have in a real non-portable home.

Why there is no living organisms on Pluto

- There are no living organisms on Pluto because for one thing Pluto is way too cold for someone to live there, they would have to be made of warmness or something to live there. The second reason why there are no living organisms on Pluto is because how would they survive with no food, no oxygen, no water, and how would they have gotten there without a spaceship or something.

This is where you come
in
