

**JUNE 2009      SIMPLIFIED    SCHEDULE**  
**for TIDES in the AVON RIVER at WINDSOR, N.S., and for the TIDAL BORE**  
**at TIDAL VIEW FARM (TVF) and at MANTUA BRIDGE (MB)**

The Range of tide (in metres) from low water to high water, typical for the Minas Basin is also given.

A tidal bore happens approximately 2 times each day. This schedule is simplified by giving only the significant daytime tidal bore.

**Red indicates the strongest tides which produce the more pronounced tidal bore.**
