

MAY 2009 SIMPLIFIED SCHEDULE
for TIDES in the AVON RIVER at WINDSOR, N.S., and for the TIDAL BORE
at TIDAL VIEW FARM (TVF) and at MANTUA BRIDGE (MB)

The Range of tide (in metres) from low water to high water, typical for the Minas Basin is also given.

A tidal bore happens approximately 2 times each day. This schedule is simplified by giving only the significant daytime tidal bore.

Red indicates the strongest tides which produce the more pronounced tidal bore.
